Professional profile

I am a product engineer with 13+ years in web engineering and technical leadership. I build React and Next.js interfaces, APIs, and Drupal and WordPress platforms. I have contributed to 60 professional projects across 11 sectors as part of project teams.

Technical skills

Engineering	React, Next.js, JavaScript, TypeScript, HTML, CSS, PHP, Node.js, Python, GraphQL and REST APIs.
Delivery & automation	CI/CD, GitHub, GitLab, Bitbucket, Docker, Lando, PHPCS, PHPStan, SonarQube, Playwright and browser extensions.
Performance & SEO	Technical SEO, Core Web Vitals, profiling, Redis, Varnish, CDNs and New Relic.
Security & accessibility	OAuth, SSO, security audits and remediation, semantic interfaces, accessible keyboard navigation and WCAG.
Architecture & cloud	API integrations, migrations, AWS (EC2, S3, RDS, Lambda, CloudFront, SQS), technical planning, code reviews and mentorship.
Platform specialties	Drupal 7-11, WordPress, Symfony, custom modules and themes, Composer, Drush, Pantheon, Acquia and WP Engine.

Professional experience

Rootstack

Web Tech Lead Developer

June 2023 - Present

I lead international web delivery across development finance, media, hospitality and cloud communications. I plan architecture, implement features, review code, mentor developers and verify releases.

- Build Drupal platforms for a multilateral development bank, streaming-service marketing sites and microsites, and a hotel chain's booking platform.
- Implement multilingual publishing, URL aliases, revisions, country availability and per-language previews.
- Improve bulk republishing, job-status monitoring and Drush automation; upgrade Drupal and dependencies and remediate security issues.
- Integrate S3/CDN media and sitemap delivery; develop decoupled React and Next.js interfaces backed by GraphQL and REST APIs.
- Build Drupal components with Twig and Storybook, Marketo forms, multilingual navigation, caching and Pantheon releases for cloud communications.
- Profile performance with New Relic and implement Redis, Varnish and CDN caching.
- Build CI/CD pipelines; add DDEV PHPUnit commands and GitHub Actions checks to a Drupal demo.
- Built Python/FastAPI billing-summary APIs with payment-status logic, access checks and regression tests for subscription lifecycle states.

Victor Jimenez

Earlier experience

Ilumno

Tech Lead

January 2020 - June 2023

Led legacy-to-microservices migrations and React/Drupal JSON:API delivery. Built Redis, Varnish and CloudFront caching, automated AWS infrastructure, and mentored developers.

Legis

Tech Lead Consultant

July 2021 - April 2023

Delivered enterprise Drupal migrations, standardized Composer and Drush workflows, and improved GitLab CI/Jenkins deployments and AWS integrations.

Bits Americas

Full Stack Developer

January 2018 - July 2021

Developed LATAM telecom bill-payment portals with CyberSource, Drupal and Angular, plus APIs for analytics and personalization. Supported headless Drupal with Angular/React and Acquia/Pantheon hosting.

Velaio

Tech Lead

January 2015 - January 2018

Built custom Drupal modules, themes and CRM integrations. Conducted performance and security audits for high-traffic platforms.

Skena

Web Developer

January 2013 - January 2015

Built and maintained database-driven applications using Java, C#, ASP.NET and Oracle.

Selected personal projects

Project Context Connector

Drupal module exposing permission-controlled, read-only site snapshots for automation and CI/CD tools.

Project Context Connector for WordPress

WordPress integration providing read-only site context for external tools and automation workflows.

Education & languages

B.S., Information Systems Engineering | UNAD, Colombia | 2020-2024

Associate degree in Information Systems | Universidad del Valle | 2009-2012

English C1 Program | EC English School
